Elitecore Technologies launches EliteAAA appliance version

Elitecore Technologies, a leading provider of Telecom OSS BSS system for next generation voice, video & data services announced the launch of EliteAAA appliance from its CRESTEL division.

Elitecore has a proven domain expertise in the AAA market having satisfied customer base in India and APAC

EliteAAA is the answer to the aggressive and ever-growing access control, service delivery and accounting requirements of carriers, service providers, and wireless operators. EliteAAA centrally manages the authentication of the subscribers, authorizes them for appropriate level of service, and ensures reliable accounting of their usage. EliteAAA enhances service provider's competitive strength; it sits at the core into the very enablement of the service.

NIKHIL JAIN
COO & Director
Elitecore Technologies Ltd.

In addition to the authentication, authorization and accounting functionality required by other types of networks, WIMAX AAA system requires the intelligence and performance to manage mobility and roaming, EliteAAA supports multi-services and is NWG 1.2 compliant for Mobile WIMAX networks

"AAA has huge market potential in the telecom market

as Next Gen technology savvy users access the network from a wide variety of access points and through a wide variety of devices. AAA market is forecasted to reach \$13.3 billion by 2011, with proven deployments with leading telecom operators across the globe we are very optimistic about our presence in the AAA market" says Nikhil Jain - COO & Director, Elitecore Technologies Ltd.

Elitecore AAA in a box solution offers great convenience to service providers through reduced implementation costs and slashes setup times, reduced maintenance, thereby lowering service provider's administrative burden. EliteAAA appliance is on Intel platform and gives a performance of 1000 transactions per second. EliteAAA appliance will come in various versions from 500 ports to 50,000 ports. It's simple to configure and maintain browser-based management interface provides a secure console to remotely configure any of the local server settings.

EliteAAA supports Multiple Service & Business models be it wireless or wireline Internet access, outsourced remote access, managed VPNs, broadband, VoIP or any combination of services.

Elitecore plans to sell its EliteAAA appliance as an OEM vendor, It is looking to tie up with Distributors or channel partners for its EliteAAA.
